

**Mosaic<sup>®</sup> Universal** EN Composite

**Description:** Mosaic is a light-cured, bio-BMI-based resin composite with reinforced glass filler. It is radiopaque and available in multiple shades. It has a nano-hybrid composition with 50% filler content and a filler size of up to 20 nanometer silica. Filler load is 65% by volume for the dentin shades and 56% for the enamel shades. Mosaic is available in multi-use syringes (4.0 gram) and single use capsules (0.2 gram).

**Indications for use:** Mosaic is used for direct and indirect restorations (inlays, onlays and veneers) in the anterior and posterior regions.

**Directions for use:**

1. If refrigerated, bring product to room temperature.
2. Apply dentin bonding agent to preparation according to Manufacturer's instructions.
3. Apply Mosaic to the prepared surface. It is a flowable composite, like Permalin<sup>®</sup> before placing Mosaic.
- For inlays:**
  - A. Flip open cap on the Mosaic syringe.
  - B. Twist handle clockwise (step) to express composite. Resistance will lessen with each twist.
  - C. Immediately replace cap after dispensing and use syringe to prevent polymerization from ambient light.

**For Singles (composites):**

1. Mosaic is used for inlay only.
2. Make sure you fill tip properly into preparation.
3. Use one dose single as designed for single patient use only. Do not reuse to avoid cross-contamination.

**For Singles (intraoral):**

1. Place Mosaic in incremental layers (0.5-1.5mm thick) and cure. Follow with up to 2mm increments curing after each layer.
2. Cure each layer for 10 seconds. For high quality curing use a curing light with high quality curing light (>600mW/cm<sup>2</sup>) cure for each layer 10 seconds. For medium quality curing use a curing light with high quality curing light (>600mW/cm<sup>2</sup>) cure for each layer 20 seconds. An final cure of 20 seconds is suggested with all high quality curing light.

**For final increment is placed, all quality curing light.**

1. After final increment is placed, all quality curing light.

**For final increment is placed, all quality curing light.**

1. After final increment is placed, all quality curing light.

**Mosaic<sup>®</sup> Universal** DE Komposit

**Description:** Mosaic ist ein lichthärtendes, bio-BMI-basiertes Resin Komposit mit verstärktem Glasfüller. Es ist radiopak und ist in mehreren Schattierungen erhältlich. Es hat eine Nano-Hybrid-Zusammensetzung mit 50% Füllstoffgehalt und einer Füllstoffgröße von bis zu 20 Nanometern Silica. Die Füllstofflast beträgt 65% Volumenanteil für Zahndenturschattierungen und 56% für Zahnenamurschattierungen. Mosaic wird in Mehrfachdosierpatronen (4,0 Gramm) und Einzeldosiskapseln (0,2 Gramm) geliefert.

**Anwendungsgebiete:** Mosaic wird für direkte und indirekte Restaurationen (Inlays, Onlays und Veneers) im Vorder- und Hinterzahngebiet eingesetzt.

**Benutzungshinweise:**

1. Wenn abgefüllt, bringen Sie das Produkt auf Raumtemperatur zurück.
2. Tragen Sie ein Dentin-Bindemittel-Material gemäß den Herstelleranweisungen auf die Zahnoberfläche auf.
3. Tragen Sie Mosaic auf die vorbereitete Zahnoberfläche auf. Es ist ein fließfähiges Komposit, wie Permalin<sup>®</sup> vor dem Aufbringen von Mosaic.
- Für Inlays:**
  - A. Schieben Sie den Kappen ab und öffnen Sie die Mosaic-Spritze.
  - B. Drehen Sie den Griff nach rechts (Schritt), um das Komposit zu extrahieren. Der Widerstand wird mit jeder Drehung abnehmen.
  - C. Ersetzen Sie sofort den Kappen nach dem Ausgeben der notwendigen Menge Komposit und schließen Sie die Kappe wieder ab, um die Polymerisation durch Umgebungslicht zu vermeiden.

**Für Einzelstücke (Komposite):**

1. Mosaic wird für Inlays nur verwendet.
2. Stellen Sie sicher, dass Sie die Spitze richtig in die Vorbereitung füllen.
3. Verwenden Sie ein Einzeldosisprodukt nur für einen einzelnen Patienten. Wiederverwendung kann zu Kreuzkontamination führen.

**Für Einzelstücke (intraoral):**

1. Mosaic wird für Inlays nur verwendet.

**Mosaic<sup>®</sup> Universal** FR Composite

**Description:** Mosaic est un composite à durcissement indirect à base de résine bio-BMI. Il est radiopaque et disponible en plusieurs nuances. Il a une composition hybride nano avec un contenu en charges de 50% et une taille de particules allant jusqu'à 20 nanomètres de silice. La charge de remplissage est de 65% par volume pour les nuances dentaires et de 56% pour les nuances d'émail. Mosaic est livré en seringues multi-usage (4,0 grammes) et en capsules individuelles (0,2 grammes).

**Indications d'utilisation:** Mosaic est utilisé pour les restaurations directes et indirectes (inlays, onlays et facettes) dans les régions antérieures et postérieures.

**Instructions pour l'usage:**

1. Si le produit est réfrigéré, le bringer à température ambiante.
2. Appliquez l'adhésif de la préparation selon les instructions du fabricant.
3. Appliquez Mosaic sur la surface préparée. C'est un composite à écoulement, comme Permalin<sup>®</sup> avant l'application de Mosaic.
- Pour les inlays:**
  - A. Retirez le capuchon de la seringue Mosaic.
  - B. Orientez le piston en direction de la droite pour exprimer le composite. La résistance diminue à chaque tour.
  - C. Remplacez immédiatement le capuchon après avoir exprimé le composite pour éviter une polymérisation à la lumière ambiante.

**Pour les unidos (composites):**

1. Mosaic est utilisé pour les inlays uniquement.
2. Assurez-vous de remplir correctement la pointe de la préparation.
3. N'utilisez pas une capsule individuelle pour plusieurs patients afin d'éviter la contamination croisée.

**Pour les unidos (intraorales):**

1. Mosaic est utilisé pour les inlays uniquement.

**Mosaic<sup>®</sup> Universal** ES Resina Composta

**Description:** Mosaic es un compuesto de resina indirecto curado a base de resina bio-BMI. Es radiopaco y está disponible en varias tonalidades. Tiene una composición híbrida nano con un contenido de cargas de 50% y un tamaño de partículas de hasta 20 nanómetros de sílice. La carga de relleno es de 65% por volumen para las tonalidades de dientes y de 56% por el tonalidad de esmalte. Mosaic se ofrece en jeringas para múltiples usos (4.0 gramos) y en cápsulas individuales (0.2 gramos).

**Indicaciones de uso:** Mosaic se utiliza para restauraciones directas e indirectas (inlays, onlays y carillas) tanto en la región anterior como en la posterior.

**Instrucciones de uso:**

1. Si está refrigerado, lleve el producto a temperatura ambiente.
2. Aplique el adhesivo de la preparación de acuerdo con las instrucciones del fabricante.
3. Aplique Mosaic a la superficie preparada. Es un compuesto de flujo, como Permalin<sup>®</sup> antes de aplicar Mosaic.
- Para inlays:**
  - A. Quite el tapón de la jeringa Mosaic.
  - B. Gire la pistón a la derecha para expresar el compuesto. La resistencia se reduce a cada vuelta.
  - C. Reemplace la tapa inmediatamente después de dispensar el compuesto para evitar la polimerización de la luz ambiental.

**Para Compuels (composites):**

1. Mosaic se utiliza solo para inlays.
2. Asegure que rellene correctamente la punta de la preparación.
3. No reutilice para evitar contaminación cruzada.

**Para Compuels (intraoral):**

1. Mosaic se utiliza solo para inlays.
