

Fit Checker™ Advanced & Fit Checker™ Advanced Blue

The simplest
way towards
successful
finalisation of your
prosthetic work

For a simple, easy and
precise check of the fit
of prosthetic work.

GC

Fit Checker™ Advanced Blue

The ideal blue colour gradation for

- Fit checking of all kinds of prosthetic works, especially resin, ceramic and zirconia-based crowns and bridges.
- Bite registration and evaluation of occlusal contacts.

Balanced thixotropy allows for a **non-runny consistency**. Under pressure, Fit Checker Advanced Blue offers **easy flow** and **extremely thin film thickness** for a perfect fit.

Misfits are easily detected thanks to **optimal transparency** and unique **blue colour gradation**.

Finally, it's possible to make certain of a **perfect fit for indirect restorations**, avoiding marginal gaps and major occlusal adjustments after cementation.

1

Snap set

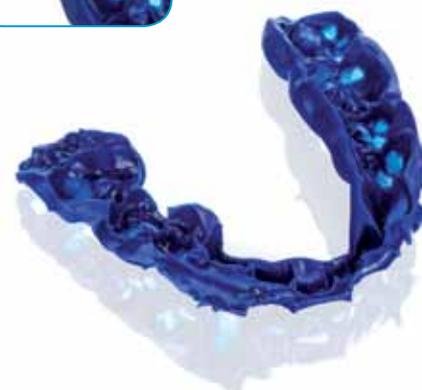

Sufficient working time and rapid setting (1 min. in the mouth) for a fast and comfortable procedure.

2

Clear and precise visualisation

A perfect colour gradation for immediate visualisation of occlusal contacts and poorly fitting areas.

Fit Checker™ Advanced

The ideal **white** colour gradation for

- Fit checking of all kinds of prosthetic works, especially complete and partial dentures and metal-based crowns and bridges.

The perfect solution for checking the adaptation of complete and partial dentures.

Fit Checker Advanced offers ideal consistency and high wettability for **easy flow** into denture bases and oral tissues. Fit Checker Advanced is easily **removed in one step**.

Denture misfits can then be corrected with acrylic reliners. After relining, final checking is performed to assure **patient comfort**.

3

No mess during adjustments

The set material does not get caught by the bur while relieving pressure spots.

4

Easy to peel off

The silicone pellicle peels off easily for a clean and fast procedure.

The simplest way towards successful finalisation of your prosthetic work

Fit Checker Advanced and Fit Checker Advanced Blue from GC provide a simple and precise way to assess the fit of prosthetics and make timely adjustments at the fitting/seating appointment - avoiding potential future costs and ensuring patient comfort.

Fit Checker™ Advanced	Benefit	Fit Checker™ Advanced Blue
VPES Silicone	Innovative silicone material with intrinsic wettability, flowability and resistance	VPES Silicone
White	Two different colours to meet all clinical requirements	Blue
Working time: 1 min. Setting time: 1 min. in mouth	Sufficient working time and a short setting time in the mouth	Working time: 1 min. Setting time: 1 min. in mouth
Handmix (tubes) or Automix (cartridges)	Automix cartridges available for an easy, clean and fast procedure	Automix cartridges
