

# AH Plus<sup>®</sup> Bioceramic Sealer

## What sets this sealer apart?

Bioactivity of bioceramic sealers is important but you need more to ensure a stable seal. The apical seal is only completed after the sealer sets.

AH Plus Bioceramic Sealer sets apart from the rest because it sets quickly, has a high washout resistance and is more radiopaque compared to current market leaders.

1. data on file, compared to the most common bioceramic sealers in the market.

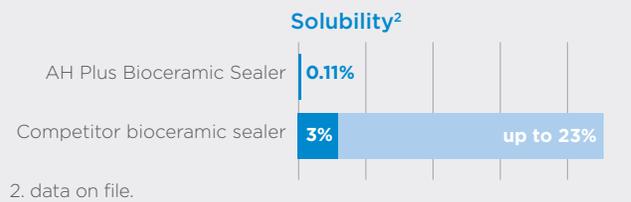

# AH Plus<sup>®</sup> Bioceramic Sealer

## Safe and gap-free healing

AH Plus Bioceramic Sealer is a tricalcium silicate-based sealer that stimulate formation of hydroxylapatite that promote tissue healing in the root canal. The sealer also has the feature of being both lipophilic and hydrophilic which create a gap-free bond with zero shrinkage.

## Dimensionally stable & high washout resistance

Thanks to its low solubility and low film thickness AH Plus Bioceramic Sealer stably seals the root canal for a sufficient period of time.

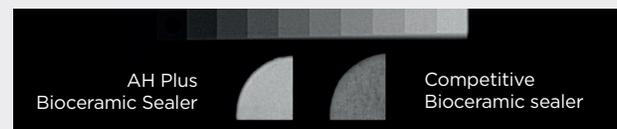

## A faster set

## Better radiopacity

**25% more radiopaque** than competitor bioceramic sealer brands<sup>1</sup>.

1. data on file.

## Retreatability

Easily removable after setting with a hand file or Niti file.
